

7 Ways to Use the Silicone Craft Sheet

Compiled by Julie Davison, www.juliedavison.com

1. **Heat Resistant:** Use it for protecting your work surface when heat embossing elements.
2. **Hot Glue Mat:** Clean up is a breeze when you use your hot glue gun over the Silicone Craft Sheet! Add a large dot of hot glue in the middle of the mat and add petals or other pieces and then pull up your finished element with ease.

3. **Emboss with your Dies or Masks:** Layer the silicone mat with masks or dies to create an embossed look. Here's how to create your "sandwich", from Bottom to Top: Platform, Cutting Pad, Silicone Mat, Cardstock, Mask, Cutting Pad.

4. **Reflection Technique:** Stamp an image on cardstock. Stamp again on the Silicone Craft Sheet and the turn it over and press down to transfer the inked image to a piece of cardstock.
5. **Sponging:** The smooth surface will make it easy to sponge the edges of your cardstock. When you're done, simply rinse the ink off with water.
6. **Resists Adhesive:** Protect your work surface from sticky adhesive by applying adhesive to your projects over the silicone mat. It will catch any "run off" adhesive and won't get, or stay, sticky!
7. **Watercolor Palette:** Add ink refill or ink pad direct to silicone mat and add water to create a washable and reusable watercolor palette.
